Personal-use license

Thank you for buying Slow Geometry. This file is for your personal, non-commercial use: print as many copies as you like for yourself and your household, for example to color a favorite design again.

Please don't resell, share, upload or redistribute this file or its pages, in print or digitally, and don't use the designs in products for sale.

Printing tips: print at 100% / "Actual size" on US Letter paper. Heavier paper (65-110 lb cardstock) works best for markers. Each design sits on its own page, so print single-sided.

The patterns in this book were drawn by software: every page is a geometric design generated with code (mandalas, star lattices, tessellations, Truchet tiles, op-art waves and kaleidoscopes), then checked so that no two pages are near-duplicates.

How to use this book

- Every design is printed on its own page with a blank back, so markers and inks won't spoil the next design.
- Using alcohol markers? Slide a sheet of scrap paper behind the page you're coloring.
- Start anywhere. The designs are not in order of difficulty: big open tiles sit next to finer lattices.
- Go slow. Pick three or four colors, then let the repeating shapes decide where they go.
- Test your pens, pencils and markers in the swatches below before you start.
